Recommendation letter for Nishchya Arya

I am professor in software engineering at University of Gothenburg in Sweden, at the department which is integrated with Chalmers University of Technology. I lead a research group on metrics and artificial intelligence support for software engineering. I am also a deputy dean of the IT Faculty of the University of Gothenburg and Editor-in-Chief of Information and Software Technology. I am also the lecturer and examiner in the course DIT633 *Development of Embedded and Real-Time Software*.

I provide this recommendation letter for Nishchya Arya, who received the top grade (5) in my course. To receive the top grade, one needs to be proficient in C programming, especially on a hardware level – handling pointers, registers, files, sockets, and closely-related concepts. The practical part of the course includes the work with physical Arduino boards, sensors like radars and actuators like motors.

Therefore, I can recommend Nishchya Arya to any programming-related assignment that includes hardware and software programming and for any studies at the Master level.

A handwritten signature in black ink, appearing to read 'Mirosław Staron'.

Mirosław Staron, PhD
Professor, Computer Science and Engineering, University of Gothenburg
